

Jiaxuan Li

Master student, Department of Computer Science
University of Harbin Institute of Technology, Shenzhen, China

Email: jiaxuanliniki@gmail.com
Telephone: 18126352475

Education

Stevens Institute of Technology, State of New Jersey, United States

Ph.D., computer science Sep. 2020 to Sep. 2021

As a result of the US PP10043 ban, I cannot obtain a visa and withdraw from the program.

Harbin Institute of Technology, Shenzhen, China

M.S., computer science, exemption from entrance examination Sep. 2017 to Jan. 2020

Supervisor: Dr. Philippe Fournier-Viger

Hai Nan University, Hainan, China

B.S., computer science Sep. 2013 to Jul. 2017

Supervisor: Dr. Yucong Duan

Publications

- Anti-Asian Hate Speech Detection via Data Augmented Semantic Relation Inference. **Jiaxuan Li**⁺, Yue Ning*. *Proc. 16th Intern. (AAAI) Conf. on Web and Social Media (ICWSM), AAAI, 2022*. Accepted.
- A Survey of Pattern Mining in Dynamic Graphs. Philippe Fournier-Viger*, Ganghuan He, Chao Cheng, **Jiaxuan Li**, Jerry Chun-Wei Lin, Unil Yun. *WIREs Data Mining and Knowledge Discovery, Wiley, 2019*.
- Efficiently Extracting Cost-Effective patterns from Sequential Event Log. Philippe Fournier-Viger*, **Jiaxuan Li**⁺, Jerry Chun-Wei Lin, Tin Truong Chi, R. Uday Kiran. *Knowledge-Based Systems (KBS,QI), Elsevier, 2019*.
- Discovering and Visualizing Patterns in Utility Sequences. Philippe Fournier-Viger*, **Jiaxuan Li**⁺, Jerry Chun-Wei Lin, Tin Truong Chi. *Proc. 21st Intern. Conf. on Data Warehousing and Knowledge Discovery (DAWAK), Springer, 2019*.
- Discovering low-cost high utility patterns. **Jiaxuan Li**⁺, Philippe Fournier-Viger*, Lin, Jerry Chun-Wei Lin, Tin Truong Chi. *1st International Workshop on Utility-Driven Mining (UDM), in conjunction with the KDD 2018 conference, ACM press, 2018*. **Oral presentation**.

*Academic supervisor, + main student contributor.

Research & Industry Experience

- **Golaxy Data Technologies** Jul. 2020 to May. 2021
Affiliation with Institute of Computing Technology, Chinese Academy of Sciences
Mentor: Shaolong Zhou
 - Integrate entity category and relative position information as features and construct a Bert-CRF baseline model for comparison experiments.
 - Construct a multi-head selection framework with a bilinear layer to solve the entity nesting problem.
 - Construct a cascade of classification layers to identify entities with their corresponding types and a multi-head selection framework to extract complex entity relation pairs.

- **Harbin Institute of Technology, Shenzhen** Sep. 2017 to Jan. 2020
 Mentor: Dr. Philippe Fournier-Viger
- **Cost-effective pattern mining** Mar. 2018 to Jul. 2018
 - Mining cost-effective pattern from event logs in E-learning to provide insights about how to utilize the learning materials.
 - Combined a cost model into high utility sequential pattern mining considering the resources, effort, time or cost required to apply the patterns for getting a desirable utility.
 - Designed statistical measures to assess the correlation between utility and cost for the needs of different applications in terms of the type of utility (binary or numeric).
 - Integrated buffer structure into Prefixspan algorithm and designed pruning strategy to improve algorithms' performance in terms of memory usage and execution time.
- **Cost-effective pattern mining from heterogeneous data source** Jul. 2019 to Dec. 2019
 - Mining guidance patterns in e-learning from heterogeneous data source for specific group of users.
 - Combining users' attributes, such as personal information and educational background, with their learning activities.
 - Clustering users based on their attributes and mining cost-effective patterns from their sequences of activities respectively to assist different group of users use materials efficiently.
 - Representing the concatenated features using vector and utilizing a statistical measure to evaluate the correlation between the feature and utility.
 - Currently designing the model and searching potential datasets for testing.
- **Noah'Ark Lab, Huawei Technologies** Aug. 2019 to Nov. 2019
 Mentor: Dr. Min Zhou
 - Spatial-temporal sequence pattern mining in telecommunication network to compress alarm records, identify important alarms, and locate root-cause alarms.
 - Using dynamic attributes graph as an approach to mine important sequences of alarms that have a higher priority to be responded from various network equipment, meanwhile keeping the topology of the network.
 - Designing correlation measure and generating potential correlated sequence rules of alarms to identify the root-cause alarms.
- **2012 Lab, Huawei Technologies** Jun. 2019 to Aug. 2019
 Mentor: Dr. Zixian Zhang
 - Designed, implemented and tested a function for automatically extracting and checking the CAD drawings' content about servers to improve the manual inspection's accuracy.
 - Analyzed about 5 types of drawings. Extracted their components' data structure using ActiveX and mined different components' crucial features, respectively.
 - Based on those features, implemented algorithms to structurally extract contents in specified areas, compared those information with the official documents, and finally generated a detailed verification report.
 - Checked the operating specifications of the drawings, such as the intersection between texts and lines, missing arrows, and manual errors, such as the absence of a component's description or missing a component that should be contained in the drawing.
 - Tested about 100 drawings, and now this feature was integrated into their production system.

Selected Awards

- Outstanding graduates of Hainan University, 2017.
- Mathematical Contest in Modeling Certificate of Achievement, Honorable Mention, 2016.
