Jiaxuan Li

Master student, Department of Computer Science

Email: jiaxuanliniki@gmail.com

University of Harbin Institute of Technology, Shenzhen, China

Telephone: 18126353475

Education

Stevens Institute of Technology, State of New Jersey, United States

Ph.D., computer science   Sep. 2020 to Sep. 2021

As a result of the US PP10043 ban, I cannot obtain a visa and withdraw from the program.

Harbin Institute of Technology，Shenzhen, China

M.S., computer science   Sep. 2017 to Jan. 2020

GPA: 3.1 / 4.0

Supervisor: Dr. Philippe Fournier-Viger

Hai Nan University, Hainan, China

B.S., computer science   Sep. 2013 to Jul. 2017

GPA: 3.67 / 4.0 (88.2 / 100), Top 3%

Supervisor: Dr. Yucong Duan

Publications

- **Jiaxuan Li**[+], Yue Ning*. Anti-Asian Hate Speech Detection via Data Augmented Semantic Relation Inference. *Proc. 16st Intern. (AAAI) Conf. on Web and Social Media (ICWSM 2022), AAAI*. Accepted.

- A Survey of Pattern Mining in Dynamic Graphs. Philippe Fournier-Viger*, Ganghuan He, Chao Cheng, **Jiaxuan Li**, Jerry Chun-Wei Lin, Unil Yun. *WIREs Data Mining and Knowledge Discovery, Wiley*, 2019.

- Efficiently Extracting Cost-Effective patterns from Sequential Event Log. Philippe Fournier-Viger*, **Jiaxuan Li**[+], Jerry Chun-Wei Lin, Tin Truong Chi, R. Uday Kiran. *Knowledge-Based Systems (KBS,Q1), Elsevier*, 2019**.**

- Discovering and Visualizing Patterns in Utility Sequences. Philippe Fournier-Viger*, **Jiaxuan Li**[+], Jerry Chun-Wei Lin, Tin Truong Chi. *Proc. 21st Intern. Conf. on Data Warehousing and Knowledge Discovery (DAWAK), Springer*, 2019.

- Discovering low-cost high utility patterns. **Jiaxuan Li**[+], Philippe Fournier-Viger*, Lin, Jerry Chun-Wei Lin, Tin Truong Chi. *1st International Workshop on Utility-Driven Mining (UDM), in conjunction with the KDD 2018 conference, ACM press*, 2018. **Oral presentation.**

  *Academic supervisor, + main student contributor.

Research & Industry Experience

- Golaxy Data Technologies
  - Integrate entity category and relative position information as features and construct a Bert-CRF baseline model for comparison experiments.
  - Construct a multi-head selection with a bilinear layer to solve the entity nesting problem.
  - Construct a cascade classification network to identify entities and their corresponding types, and a multi-head selection network to extract complex entity relation pairs.

- **Harbin Institute of Technology, Shenzhen**   Mar. 2018 to Now

  Mentor: Dr. Philippe Fournier-Viger

  - **Cost-effective pattern mining**   Mar. 2018 to Jul. 2019
    – Mining cost-effective pattern from event logs in E-learning to provide insights about how to utilize the learning materials.
    – Combined a cost model into high utility sequential pattern mining considering the resources, effort, time or cost required to apply the patterns for getting a desirable utility.
    – Designed statistical measures to assess the correlation between utility and cost for the needs of different applications in terms of the type of utility (binary or numeric).
    – Integrated buffer structure into Prefixspan algorithm and designed pruning strategy to improve algorithms' performance in terms of memory usage and execution time.

  - **Cost-effective pattern mining from heterogeneous data source**   Jul. 2019 to Now
    – Mining guidance patterns in e-learning from heterogeneous data source for specific group of users.
    – Combining users' attributes, such as personal information and educational background, with their learning activities.
    – Clustering users based on their attributes and mining cost-effective patterns from their sequences of activities respectively to assist different group of users use materials efficiently.
    – Representing the concatenated features using vector and utilizing a statistical measure to evaluate the correlation between the feature and utility.
    – Currently designing the model and searching potential datasets for testing.

- **Noah'Ark Lab, Huawei Technologies**   Aug. 2019 to Now

  Mentor: Dr. Min Zhou

  – Spatial-temporal sequence pattern mining in telecommunication network to compress alarm records, identify important alarms, and locate root-cause alarms.
  – Using dynamic attributes graph as an approach to mine important sequences of alarms that have a higher priority to be responded from various network equipment, meanwhile keeping the topology of the network.
  – Designing correlation measure and generating potential correlated sequence rules of alarms to identify the root-cause alarms.
  –

- **2012 Lab, Huawei Technologies**   Jun. 2019 to Aug. 2019

  Mentor: Dr. Zixian Zhang

  – Designed, implemented and tested a function for automatically extracting and checking the CAD drawings' content about servers to improve the manual inspection's accuracy.
  – Analyzed about 5 types of drawings. Extracted their components' data structure using ActiveX and mined different components' crucial features, respectively.
  – Based on those features, implemented algorithms to structurally extract contents in specified areas, compared those information with the official documents, and finally generated a detailed verification report.
  – Checked the operating specifications of the drawings, such as the intersection between texts and lines, missing arrows, and manual errors, such as the absence of a component's description or missing a component that should be contained in the drawing.
  – Tested about 100 drawings, and now this feature was integrated into their production system.

Selected Awards

- Outstanding graduates of Hainan University, 2017.
- Mathematical Contest in Modeling Certificate of Achievement, Honorable Mention, 2016.
